

CLOVER

Comfortable
Collaboration

There is no such thing as quick meeting. Thus squirming, fatigue, and loss of focus are unavoidable. Working with others requires a completely different set of postures, and therefore a completely different kind of chair. One that helps keep you focused and comfortable in collaborative settings.

EVERYTHING FLEXES

Every part of Clover was designed to flex and adjust to your body. The backrest's top flexing edge lets you comfortably rest your arm on top of the chair. The flexing backrest encourages you to move and shift, allowing you to sit accordance to your body weight as well as height. And the flexing back contours to support any posture your body needs at any given moment.

AUTOMATIC COMFORT

The Clover chair offers one manual adjustment, which is the seat height. The rest is taken care of for you. The self-weight adjustment mechanism naturally puts you in best position of comfort right from the start. When you first sit on Clover, it senses your center of gravity and adjusts to the position that will put the least amount of stress in your body, while still keeping you properly oriented and supported. When you move or shift posture, Clover does the same, allowing you to enjoy the chair in comfort.

Consistent Support

That nice flex you feel when you lean against the Clover chair's backrest is the what we wanted for you when we designed this chair.

Different than typical chair, CLOVER offer flexors that move with your back for consistent, dynamic support.

Adjustable Headrest

Two-pivoted headrest allows precise adjustment of the angle and height to support neck comfortably in any sitting position.

4D Adjustable Armrest

Telescope in and out, move forward and back, pivot, and adjust up and down which provides natural position that comfortably supports the wrists, forearms, shoulders and neck.

Seat Slider

Adjustable seat depth that accommodates different body shapes for long-hours comfort.
